

Non-UCITS retail scheme Key Investor Information

This document provides you with key investor information about this Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

TM Fulcrum Diversified Liquid Alternatives Fund USD Class F

A sub Fund of the TM Fulcrum NURS Funds

This Fund is managed by Tutman LLP

ISIN (Accumulation):

GB00BFYN9X50

Objectives and Investment Policy

The investment objective of the Fund is to achieve long-term returns of the Bank of England Base Rate +4%, net of fees, over rolling five year annualised periods. The Fund will be managed without reference to a benchmark, however, the Fund targets a lower volatility than equity markets, meaning the MSCI World Hedged. A positive return is not guaranteed and capital is in fact at risk.

The Fund seeks to achieve its objective by investing in a diversified portfolio of alternative assets, typically consisting of real estate securities, infrastructure securities, debt securities (including those issued by below-investment grade corporate bodies, developed and emerging market governments and/or supranational institutions), securitised credit instruments, convertible bonds, warrants, collective investment schemes (including index funds such as exchange traded funds (ETFs), actively managed funds, absolute return funds), cash, near cash and money market instruments. The Fund will also have the ability to invest outside of alternative assets in equity securities, equity related securities, debt securities (including those issued by corporate bodies, governments and/or supranational institutions). Indirect exposure to commodities may be sought through investment in transferable securities, eligible index derivatives and collective investment schemes.

The Fund may make significant use of derivatives for investment purposes and for efficient portfolio management. The Fund will use hedging strategies to reduce risk over the short term without materially altering its risk profile. The Fund targets a lower volatility than equity markets, meaning the MSCI World Hedged.

The information in this document relates to and is representative of the US dollar class. The base currency of the Fund is pounds sterling.

Income arising from the Fund is reinvested in the case of accumulation shares. Investors can buy and sell shares on demand when the scheme prices daily at 12 midday.

Risk and Reward Profile

The risk rating of the Fund is category 4 due to the volatility of simulated data which sits in a range of between 5% and 10%. The risk rating is calculated using historical data and a prescribed standard deviation methodology. The simulated data used is consistent with risk limits of the Fund.

- This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may shift over time.
- The lowest category does not mean 'risk free'.
- This indicator is not a measure of the risk that you may lose the amount you have invested.

The following risks are material in addition to the risks captured by the indicator above:

- The price of units/shares and any income from them may fall as well as rise and investors may not get back the full amount invested. Past performance is not a guide to future performance. There is no assurance that the investment objective of the Fund will actually be achieved.
- Where investments are in the shares of companies (equities), the value of those equities may fluctuate, sometimes dramatically, in response to the activities and results of individual companies or because of general market and economic conditions or other events.
- Where derivative or structured product investments in the Fund may include a counterparty, there is a risk that the counterparty will not fulfil their obligation.
- This Fund is allowed to use derivatives to achieve its objective. Derivatives can cause a Fund to become leveraged. Leverage occurs when exposure to an area invested in is greater than its amount invested, resulting in the Fund being exposed to a potentially greater loss than the initial investment.
- More political, economic or structural challenges face emerging markets or less developed countries than developed countries which may increase volatility and uncertainty.
- Investment in other funds may mean that the objectives and risk profiles of those underlying funds may not (always) be fully in line with those of the Fund.

All the risks currently identified as being applicable to the Fund are set out in the 'Risk' section of the Prospectus.

Charges for this Fund

The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

One-off charges taken before or after you invest	
Entry Charge	None
Exit Charge	None
This is the maximum that might be taken out of your money before it is invested or before the proceeds of your investments are paid out	
Ongoing charges	0.89%
Charges taken from the Fund under certain specific conditions	
Performance fee	None

The entry and exit charges shown are maximum figures. In some cases you might pay less - you can find this out from your financial adviser.

The ongoing charges figure shown here is an estimate of the charges. The Non-UCITS annual report for each financial year will include detail on the exact charges made. This figure may vary from year to year. It excludes:

- Portfolio transaction costs, except in the case of an entry/exit charge paid by the Fund when buying or selling units/shares in another collective investment scheme.

For more information about charges, please see the section headed 'Charges and Expenses' in the Fund's Prospectus, which is available on request via email to thesisut@tutman.co.uk
