## TM Redwheel UK Equity Income Fund Class L

A sub Fund of the TM Redwheel Funds

This Fund is managed by Thesis Unit Trust Management Limited ISIN (Accumulation):

GB00BG342D ISIN (Income): GB00BG342F97

### Objectives and Investment Policy

The Fund aims to deliver a dividend yield in excess of the FTSE All Share Index, whilst providing long term capital growth.

The Fund invests at least 80% of its assets in a concentrated range of equities issued by UK companies and equity related securities received through corporate action such as preference shares and rights. These are companies that are incorporated, headquartered or have their principal business activities in the UK. The Fund typically holds investments in 25-45 companies.

The Fund focuses on companies that have certain 'value' characteristics. Value is assessed by looking at indicators such as cash flows, dividends and earnings to identify securities which the Investment Manager believes have been undervalued by the market.

The Fund may also invest in other global equities and equity related securities, global collective investment schemes, UK collective investment schemes (including those managed or operated by the ACD), fixed income securities, warrants and money market instruments and hold cash.

The Fund may use derivatives for Efficient Portfolio Management purposes.

The target of the Fund is to deliver a dividend yield in excess of the FTSE All Share Index, as set out in the Investment Objective above. Therefore the index is a target for the yield. The benchmark can also be used for performance comparison because the constituents are representative of the areas in which the Company itself is likely to invest.

The base currency of the Fund is pounds sterling.

Income arising from the Fund is distributed to the holders of income shares, and reinvested in the case of accumulation shares. Investors can buy and sell shares on demand when the scheme prices daily at 12 midday.

### Risk and Reward Profile

The risk rating of the Fund is category 6 due to the volatility of simulated data which sits in a range of between 15% and 25%. The risk rating is calculated using historical data and a prescribed standard deviation methodology. The simulated data used is consistent with risk limits of the Fund.

- This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may shift over time.
- The lowest category does not mean 'risk free'.
- This indicator is not a measure of the risk that you may lose the amount you have invested.

The following risks are material in addition to the risks captured by the indicator above:

- The price of units/shares and any income from them may fall as well as rise and investors may not get back the full amount invested. Past performance is not a guide to future performance. There is no assurance that the investment objective of the Fund will actually be achieved.
- Where investments are in the shares of companies (equities), the value of those equities may fluctuate, sometimes dramatically, in response to the activities and results of individual companies or because of general market and economic conditions or other events.
- Significant exposure to a particular industrial sector or geographical region puts the fund at risk of a localised event making a significant impact on the value of the Fund.
- The funds target income is not guaranteed, and the actual income may rise and fall in line with market movements.

All the risks currently identified as being applicable to the Fund are set out in the 'Risk' section of the Prospectus.
